

LISTING OF THE CLAIMS (1-21)

Claim 1 (Original): A method for dynamically managing content provided to a mobile device, said method comprising the steps of:

- a) retrieving information from a network;
- b) dynamically assessing said information;
- c) selectively filtering said information such that desired information is compiled; and
- d) forwarding said desired information to said mobile device.

Claim 2 (Original): The method of Claim 1 for dynamically managing content provided to a mobile device wherein step a) comprises retrieving information from said network wherein said information has not previously been tailored for interaction with a mobile device.

Claim 3 (Original): The method of Claim 1 for dynamically managing content provided to a mobile device wherein step b) comprises determining the application to which said information corresponds.

Claim 4 (Original): The method of Claim 1 for dynamically managing content provided to a mobile device wherein step b) comprises determining if said information contains an application-specific tag.

Claim 5 (Original): The method of Claim 4 for dynamically managing content provided to a mobile device wherein step c) comprises selectively filtering said information such that said desired information is compiled by retaining only essential portions of said information which contains said application-specific tag.

Claim 6 (Original): The method of Claim 1 for dynamically managing content provided to a mobile device wherein step c) comprises selectively filtering said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

Serial No.: 09/607534

Examiner: VU, VIET DUY
Art Unit: 2154

Claim 7 (Original): The method of Claim 1 for dynamically managing content provided to a mobile device wherein step d) further comprises, prior to forwarding said desired information to said mobile device, reformatting said desired information based upon characteristics of said mobile device.

Claim 8 (Original): A computer system comprising:
a processor;
an address/data bus coupled to said processor;
a computer readable memory coupled to communicate with said processor, said processor for performing the dynamic content management steps of:
a) retrieving information from a network;
b) dynamically assessing said information;
c) selectively filtering said information such that desired information is compiled; and
d) forwarding said desired information to a mobile device.

Claim 9 (Original): The computer system as recited in Claim 8 wherein step a) of said dynamic content management steps performed by said processor further comprises retrieving information from said network wherein said information has not previously been tailored for interaction with a mobile device.

Claim 10 (Original): The computer system as recited in Claim 8 wherein step b) of said dynamic content management steps performed by said processor further comprises determining the application to which said information corresponds.

Claim 11 (Original): The computer system as recited in Claim 8 wherein step b) of said dynamic content management steps performed by said processor further comprises determining if said information contains an application-specific tag.

Claim 12 (Original): The computer system as recited in Claim 11 wherein step b) of said dynamic content management steps performed by said processor further comprises selectively filtering said information such that said desired information is compiled by retaining only essential portions of said information which contains said application-specific tag.

Claim 13 (Original): The computer system as recited in Claim 8 wherein step c) of said dynamic content management steps performed

by said processor further comprises selectively filtering said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

Claim 14 (Original): The computer system as recited in Claim 8 wherein step d) of said dynamic content management steps performed by said processor further comprises, prior to forwarding said desired information to said mobile device, reformatting said desired information based upon characteristics of said mobile device.

Claim 15 (Original): A computer-usable medium having computer-readable program code embodied therein for causing a computer to perform the dynamic content management steps of:

- a) retrieving information from a network;
- b) dynamically assessing said information;
- c) selectively filtering said information such that desired information is compiled; and
- d) forwarding said desired information to a mobile device.

Claim 16 (Original): The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step a) to retrieve said information from said network wherein said information has not previously been tailored for interaction with a mobile device.

Claim 17 (Original): The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step b) to determine the application to which said information corresponds.

Claim 18 (Original): The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step b) to determine if said information contains an application-specific tag.

Claim 19 (Original): The computer-usable medium as recited in Claim 18, wherein said computer-usable medium further causes said computer performing step b) to selectively filter said information such that said desired information is compiled by retaining only essential portions of said information which contains said application-specific tag.

Claim 20 (Original): The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step c) to selectively filter said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

Claim 21 (Original): The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step d) to reformat said desired information based upon characteristics of said mobile device prior to forwarding said desired information to said mobile device.
